

DIMENSIONAL CONTROL SERVICES

OPERATIONAL SECTORS

- Oil & Gas
- Renewable Energy
- Cables
- Decommissioning

DIMENSIONAL CONTROL & DIGITAL TWIN

Dimensional control surveying is a precise 3D survey technique to support the execution of the design and build of complex engineering structures that might be built by necessity in different locations – requiring a ‘marrying up’ process to achieve 100% confidence in the final product installation. Thus removing the ‘doubt’ that separate modules will ‘mate’ when brought together.

TYPICAL SURVEY APPLICATIONS

- Vessel Offsets
- Subsea Well Tree As-built
- Topside Structure As-Built- Jacket & Module
- Pipe Spool SetOut
- Seabed Structures
- Pipe Flange Attitude
- Deformation
- Settlement
